As the atoll that inspired the company name, Aldabra travels far from the usual routes, in search of alternative ways, new trends and original solutions. Just like the Aldabra lagoon, where everything is renewed and galvanized by the flood tide, the company is in constant evolution and regeneration.

Aldabra is based on a continuous research and development activity, using innovative technologies and breakthrough materials, introducing solutions where design and new lighting frontiers are featuring elements.

Swiss precision, Italian design and manufacturing strictly made in Europe, are driving the quality parameters of Aldabra products, who invest a large part of its energies and resources in the innovation development, with an R&D team constantly in search for state of the art technologies, materials and aesthetic solutions. New projects originate from Aldabra partner's needs and from the imagination of the great lighting designers, the company works with, realizing new and innovative solutions fit to satisfy any level of client.

Aldabra developed some of its product lines combining traditional materials like stainless steel and aluminum with new generation polymers and nanotechnologies in perfect association with reliable professional electronics, achieving a mixture of pure innovation and quality with a great attention to energy saving and an eco-sustainable economy.

RESEARCH AND DEVELOPMENT

Aldabra bases its essence in a continuous search for solutions and product development. Thanks to a creative and technical team with great experience in the lighting industry, unique and innovative solutions are developed daily.

Most of human and financial resources are invested in the analysis of international markets to seize opportunities and trends by finding unique and efficient solutions, both technologically and aesthetically, joining the high quality of the finished product.

Choice of materials and components is oriented to the search for perfect compatibility with the environments - all simulated in our modern testing laboratories - in which the fixtures will be set.

Great attention is given to specific needs of lighting designers and lighting specialists: all our products can be customized or designed according to specific project requirements upon request.

QUALITY

Compliance with procedures, execution and verification are founding principles of our quality system: all our products are strictly controlled at every stage, from design, to production, to testing and delivery.

Aldabra's quality laboratories, managed by a professional team, ensure the control of all functional and quality parameters during development and prototyping.

In order to guarantee high quality, tests are performed on 100% of production before shipping.

Aldabra gives great attention to environment sustainability, seeking solutions that limit environmental impact.

DESIGN AND ENGINEERING

Aldabra researches and proposes innovative solutions and manufactures fixtures with a stylish and refined design.

In close collaboration with the greatest lighting architects and thanks to our knowledge of innovative technologies, we can create unique products characterized by high technical content and design.

The shape of light fixtures is as much important as their technical nature, it must always meet strict design parameters that allow a simple and quick use and are, at the same time, aesthetically pleasing and appropriate to the environment in which they are set.

Design and technology come together to create fixtures that pay the maximum attention to aesthetics, functionality and technology, combining the best tradition of Made in Italy to details typical of Swiss precision.

The rigorous testing process of electrical, mechanical and lighting performances of the fixtures guarantees to the user the highest quality, repeatability and energy saving.

CUSTOMER SERVICE

Aldabra guarantees its partners, engineers and lighting designers a very high level of pre and after sales support: skilled technical sales reps, specialized lighting and electronics engineers and an efficient multilingual customer service can quickly provide solutions to requests coming from all over the world.

RECOMMENDED INSTALLATIONS

Recommended installations show the different installation possibilities of each product.

In the technical information these installation typologies are highlighted in the various configurations, both indoor and outdoor, with the following appeal.

CODE COMPOSITION

1	choose the product variation you need
2	choose one of the combined optics
3	choose the LED color variation
4	choose one of the available product finishes
5	place the review index at the end of the code

Place the suffixes alongside the base code in order in which they appear.

OPTICS

To each available optics corresponds a letter, which must be added to the base code of the fitting for creating the purchase code.

Optics type	Spot	Narrow beam	Medium beam	Wide beam	Elliptical optics	Asymmetric optics	transparent	Diffuser satin	opal
Beam									
Code	.N	.M	.F	.W	.E	.A	.T	.S	.D

Optics type	1° - 8°	Louver 9° - 35°	Elliptical optics	1° - 8°	Honeycomb 9° - 35°	Opal diffuser
Beam						
Code	.R	.P	.U	.H	.K	.L

Note: The beam angle is specified for each product.

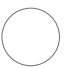

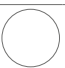

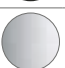

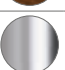

LED COLORS

To each available color temperature corresponds a suffix, which must be added to the base code of the fitting for creating the purchase code.

22	warm white		2200 K	90		RGB	01		blue
25	warm white		2500 K	91		RGBW	02		green
27	warm white		2700 K	92		RGB MOVE	03		red
30	warm white		3000 K	93		MONOCHROMATIC MOVE 3000 K	04		amber
33	warm white		3300 K	94		MONOCHROMATIC MOVE 4000 K			
35	neutral white		3500 K	95		MONOCHROMATIC MOVE 5000 K			
37	neutral white		3700 K	98		DYNAMIC WHITE SYSTEM			
40	neutral white		4000 K						
45	cool white		4500 K						
50	cool white		5000 K						
52	cool white		5200 K						
55	cool white		5500 K						

FINISHES

A suffix to match the base code of the product corresponds to the available finishes.

P	Plastic material or glass	P0		Transparent	P1		PMMA	P2		Polycarbonate
W	White	W1		Matt white	W2		White sablé			
B	Black	B1		Matt black	B2		Black sablé			
R	Red	R1		Matt red						
G	Grey	G1		Painted aluminium	G2		Grey sablé			
Z	Brown	Z1		Titanium						
A	Aluminium	A1		Matt anodized aluminium						
S	Stainless steel	S1		Satin stainless steel	S2		Polished stainless steel			
C	Camouflage	C1		Red oak	C2		Light oak			
M	Metals	M1		Brushed copper	M2		Polished chrome			

RELEASE INDEX

The last digit of the product code, placed after the full stop, is a number (starting from zero and growing) that shows the release of the item.
